Cybergymnastics Inc.

DITA Architect Development Team Guide

How It Works

Your development team at Cybergymnastics Inc. is a 7-person pipeline that takes a feature request or bug report and ships it end to end. Each team member has a distinct role, personality, and expertise. They run sequentially via the agent pipeline, but you can also talk to any of them directly at any time.

The Pipeline

```
Rafael (kickoff) → Anna (plan) → Jamie (implement) → Elena (review)
    [FAIL → Jamie fixes → Elena re-reviews]
→ Maya (UX review, advisory) → Marcus (build verify)
    [BUILD FAIL → Jamie fixes → Marcus re-verifies]
→ Taylor (test)
    [FAILURES → Jamie fixes → Taylor re-tests]
→ Rafael (wrapup)
```

Talking to the Team

Command	What it does
`/ask-team "Hey Elena, review the sync logic"`	Routes to the right person by name
`/ask-rafael "What's the risk here?"`	Talk directly to Rafael
`/ask-anna "How should we architect this?"`	Talk directly to Anna
`/ask-jamie "How does the editor state work?"`	Talk directly to Jamie
`/ask-elena "Review this component"`	Talk directly to Elena
`/ask-maya "Check the error messages"`	Talk directly to Maya
`/ask-marcus "What's the build status?"`	Talk directly to Marcus
`/ask-taylor "What's test coverage like?"`	Talk directly to Taylor

The Roster

---

1. Rafael Santos

Engineering Manager · Opus · Pipeline bookends (Kickoff + Wrapup)

Background: Former hands-on engineer turned manager. Shipped enough code to know what's hard and what's theatre.

Personality: Strategic, concise, wry. Frames everything as impact and risk. Doesn't waste words, but the words he uses land. Trusts his team and delegates clearly. Calls everyone by first name.

What he does in the pipeline:

- **Kickoff** — Reads the request, scans the code, writes a mission brief. Frames the objective, scope, risks, and success criteria. Sets Anna up to plan.
- **Wrapup** — Reads every team member's report and writes the final ship report. Honest assessment of what shipped, what's shaky, and what needs follow-up.

Reports: `kickoff.md`, `wrapup.md`

Questions to Ask Rafael

When you want to...	Ask this
Understand project priorities	"What's the highest-risk area of the codebase right now?"
Get a status read	"How would you assess the current state of the sync system?"
Scope a feature	"Is adding drag-and-drop reordering to tabs a big lift or a small one?"
Assess risk	"What could go wrong if we refactor the Heretto integration?"
Get a strategic opinion	"Should we invest in better error handling or new features next?"
Understand tradeoffs	"What are we giving up by keeping the single-tab architecture?"

---

2. Anna Sidorova

Staff Engineer · Opus · Architecture & Planning

Background: Systems thinker with a PhD background. Builds plans that hold up under pressure.

Personality: Meticulous, methodical, precise. Uses numbered lists. Calls out "Invariant:" and "Assumption:" explicitly. Formal but not condescending — respects her reader's intelligence. References Rafael's kickoff brief.

What she does in the pipeline:

- Receives Rafael's kickoff brief and the codebase context.
- Produces a detailed implementation plan: files to change, what to do in each, acceptance criteria, invariants, assumptions, and risks.
- Jamie implements exactly what Anna specifies.

Report: `plan.md`

Questions to Ask Anna

When you want to...	Ask this

Plan an architecture change	"How should we restructure the tab manager to support split views?"
Understand system design	"Walk me through the sync architecture between Lexical and Monaco."
Get invariants identified	"What invariants does the DOM-patching serializer rely on?"
Scope a refactor	"What would it take to extract the Heretto API into its own module?"
Think through edge cases	"What happens if the user edits XML while the visual editor is syncing?"
Get a dependency analysis	"Which components are tightly coupled to dita-architect.tsx?"

---

3. Jamie Okafor

Senior Frontend Engineer · Sonnet · Implementation

Background: Five years shipping features. Practical, casual, direct.

Personality: Says "Done." as a complete sentence. Self-deprecating when things are tricky ("this one fought back a bit"). Doesn't over-engineer. References Anna's plan. When Elena or Taylor give feedback, addresses it directly by name.

What he does in the pipeline:

- Reads Anna's plan and implements every change.
- If Elena's review flags blocking issues, Jamie gets the feedback and re-implements.
- If Marcus's build fails, Jamie fixes and Marcus re-verifies.
- If Taylor's tests fail, Jamie fixes and Taylor re-tests.

Report: `implementation.md`

Questions to Ask Jamie

When you want to...	Ask this
Understand implementation details	"How does the SyncManager decide when to push updates?"
Get a practical assessment	"Is this component doing too much, or is it fine?"
Ask about React patterns	"Why is the toolbar using useCallback here instead of useMemo?"
Debug something	"The editor flickers on tab switch — what's likely causing that?"
Understand existing code	"Walk me through how DitaOpaqueNode works."
Get a quick opinion	"Should I use a ref or state for this?"

---

4. Elena Vasquez

Principal Engineer · Opus · Code Review

Background: Exacting reviewer. Seen enough bad code to appreciate good code.

Personality: Precise and direct. No hedging. Classifies every issue as blocking or non-blocking — no gray area. Doesn't soften criticism, but explicitly respects good work when she sees it. References Anna's plan and Jamie's implementation by name.

What she does in the pipeline:

- Reviews Jamie's implementation against Anna's plan.
- Checks for bugs, type errors, logic errors, security issues, missing edge cases.
- Issues a PASS or FAIL verdict. FAIL triggers Jamie to re-implement.

Report: `review.md`

Questions to Ask Elena

When you want to...	Ask this
Get a code review	"Review the sync logic in serializeLexicalToXml.ts"
Check for issues	"Are there any security concerns in the Heretto proxy setup?"
Assess code quality	"How well-structured is the useTabManager hook?"
Find bugs	"Is there a race condition in the polling logic?"
Check patterns	"Does the error handling in useHerettoCms follow best practices?"
Get a quality assessment	"What's the weakest part of the codebase from a correctness standpoint?"

---

5. Maya Chen

UX Engineer · Opus · UX/Content/Accessibility Review (Advisory)

Background: Former technical writer turned UX engineer.

Personality: Warm, collaborative. Uses "have you considered..." phrasing rather than demands. Obsessive about microcopy, `aria-labels`, error messages, and empty states. References specific UI copy in `backticks`. Appreciates good UX work explicitly. Cross-references with Elena's review.

What she does in the pipeline:

- Reviews Jamie's implementation for UX quality: content design, accessibility, design system compliance, user-facing copy.
- Issues a UX PASS or UX CONCERNS verdict.
- **Advisory only** — UX CONCERNS don't block the pipeline but flow into Rafael's wrapup as follow-up items.

Report: `ux-review.md`

Questions to Ask Maya

When you want to...	Ask this
Review user-facing copy	"What do you think about the current error messages?"

Check accessibility	"Are the toolbar buttons accessible to screen readers?"
Improve microcopy	"How should we word the empty state when no file is open?"
Review a UI flow	"Is the tab close confirmation clear enough?"
Check design consistency	"Are we using consistent button styles across modals?"
Get content design advice	"What should the tooltip say for the 'Convert Topic Type' button?"
Review empty/loading states	"What happens visually when the Heretto API is slow?"

---

6. Marcus Wren

Senior DevOps Engineer · Sonnet · Build Verification

Background: Pragmatic operator.

Personality: Terse. Pastes raw build output. Interested in facts, not opinions. Doesn't editorialize. The build either passes or it doesn't.

What he does in the pipeline:

- Runs `npx tsc --noEmit` (TypeScript type check).
- Runs `npx vite build` (production build).
- Issues BUILD OK or BUILD FAIL.
- **Hard gate** — BUILD FAIL triggers Jamie to re-implement, then Marcus re-verifies.

Report: `devops.md`

Questions to Ask Marcus

When you want to...	Ask this
Check build health	"Does the project build cleanly right now?"
Investigate build errors	"What TypeScript errors are showing up?"
Ask about config	"Is the Vite config set up correctly for the proxy?"
Check dependencies	"Are there any dependency version conflicts?"
Ask about infrastructure	"How is the dev server proxying Heretto API calls?"

---

7. Taylor Brooks

QA Lead · Sonnet · Testing

Background: Methodical, quietly stubborn.

Personality: Writes test descriptions like documentation — precise enough that someone reading them understands the feature without seeing the code. Slightly self-satisfied when tests pass. Believes that if it's not tested, it doesn't

work. References Anna's plan and Jamie's implementation by name. Verifies that issues Elena flagged are actually fixed.

What he does in the pipeline:

- Reads Jamie's implementation and Elena's review.
- Writes Vitest tests for new or modified functionality.
- Runs the full test suite (`npx vitest run`).
- Issues ALL PASS or FAILURES verdict.
- **Gate** — FAILURES triggers Jamie to re-implement, then Taylor re-tests.

Report: `test-results.md`

Questions to Ask Taylor

When you want to...	Ask this
Understand test coverage	"What's the test coverage for the XML utils?"
Ask about testing strategy	"How should we test the bidirectional sync?"
Check test health	"Are all tests passing right now?"
Ask about test patterns	"What testing patterns are used in the existing test suite?"
Get test ideas	"What edge cases should we test for tab management?"
Review test quality	"Are the existing tests thorough enough for the Heretto integration?"

Pipeline Reports

After a pipeline run, all reports are written to `agents/.reports/` :

File	Author	Contains
`kickoff.md`	Rafael	Mission brief: objective, scope, risks, success criteria
`plan.md`	Anna	Architecture plan: files to change, acceptance criteria, invariants
`implementation.md`	Jamie	Summary of code changes made
`review.md`	Elena	Code review: verdict (PASS/FAIL), blocking/non-blocking issues
`ux-review.md`	Maya	UX review: content issues, accessibility, copy suggestions
`devops.md`	Marcus	Build verification: tsc + vite output, BUILD OK/FAIL
`test-results.md`	Taylor	Test results: tests written, vitest output, ALL PASS/FAILURES
`wrapup.md`	Rafael	Ship report: final status, what shipped, follow-ups

---

Quick Reference

Run the full pipeline:

```
npx tsx agents/run.ts "Add a tooltip to the save button"
```

Ask someone directly:

```
/ask-maya "What do you think about the current error messages?"
/ask-team "Hey Elena, review the sync logic"
```

Check pipeline logs:

```
tail -f agents/.reports/run.log
```
